who command with options

Who command has some options to make the custom output. Here are some samples on day-to-day usage.

1) **Indicate the time and date of the last reboot**

To do this, use `-b` options

```
$ who -b
```

We can see that system was boot the computer on December 21st, 2013 at 3:52 PM

2) **Indicate the current run-level of the init process**

With `-r` option, who will print a current run-level of the init process.

```
$ who -r
```

5) **Print only information about current terminal**
We can use \texttt{-m} option to do this.

\texttt{$ who -m$

\texttt{pungki@dev-machine:~$ who -m}
\texttt{pungki pts/0 2013-12-21 15:54 (:0.0)}
