

Navigation Bars

Having easy-to-use navigation is important for any web site.

With CSS you can transform boring HTML menus into good-looking navigation bars.

Navigation Bar = List of Links

A navigation bar needs standard HTML as a base.

In our examples we will build the navigation bar from a standard HTML list.

A navigation bar is basically a list of links, so using the `` and `` elements makes perfect sense:

```
<html>
<head>
<style>
ul {
```

```
list-style-type: none;
margin: 0;
padding: 0;
width: 60px;
```

```
}
```

```
li a {
display: block;
background-color: #dddddd;
}
```

```
</style>
</head>
<body>
```

```
<ul>
<li><a href="#home">Home</a></li>
<li><a href="#news">News</a></li>
<li><a href="#contact">Contact</a></li>
<li><a href="#about">About</a></li>
</ul>
```

`<p>A background color is added to the links to show the link area.</p>`

`<p>Notice that the whole link area is clickable, not just the text.</p>`

Now let's remove the bullets and the margins and padding from the list:

```
</body>
</html>
<!DOCTYPE html>
<html>
<head>
<style>
ul {
    list-style-type: none;
    margin: 0;
    padding: 0;
}

li a {
    display: block;
    width: 60px;
    background-color: #dddddd;
}
</style>
</head>
<body>

<ul>
    <li><a href="#home">Home</a></li>
    <li><a href="#news">News</a></li>
    <li><a href="#contact">Contact</a></li>
    <li><a href="#about">About</a></li>
</ul>

<p>A background color is added to the links to show the link area.</p>
<p>Notice that the whole link area is clickable, not just the text.</p>

</body>
</html>
```

Example explained:

- `list-style-type: none;` - Removes the bullets. A navigation bar does not need list markers
- Set `margin: 0;` and `padding: 0;` to remove browser default settings

The code in the example above is the standard code used in both vertical, and horizontal navigation bars.

Assignments

1. How to create navigation bar using links?
