

## HTML Basics

### FONT Element

The font element can let you change the size, color and typeface of text on an **HTML** page. There are three ways to use the **<FONT>** tag, depending on the attribute that you use. The **FONT** element takes **SIZE**, **FACE** and **COLOR** as attributes.

1. **SIZE:** Like word processor, the **FONT** tag uses **SIZE** attribute to specify the relative or absolute sizes of text. You can specify the font size relative to the current size (using + or -) or as an absolute size from 1 to 7. The **SIZE** of attribute is represented as :

**<FONT SIZE=VALUE >**

Few examples,

**<P> This is <FONT SIZE =+2 > resized </FONT > text, <BR>**

**This is <FONT SIZE = -2>resized</FONT> text. <BR>**

2. **FACE:** Using the **FACE** attribute, you can try to specify the typeface to be used in displaying a block of text. The **FACE** of attribute is represented as :

**<FONT FACE = "FONT NAME">**

For example,

**<P> This is <FONT FACE = "arial, helvetica">different font</FONT> text. <BR>**

**This is <FONT FACE = "times, helvetica">different font</FONT> text. <BR>**

3. **COLOR:** The **COLOR** attribute lets you specify the color of a block of text (using the color names or RGB values). For example, **COLOR="red"** or **COLOR="#ff0000"** requests red text font. There are several supported color names, but to be safe it is best to use RGB color codes, as in **COLOR = "#RRGGBB"**. The **COLOR** of attribute is represented as:

**<FONT COLOR= "RED">**

For example,

**<FONT COLOR = "RED">Blood</FONT> is the favorite food of vampires.**

**All of use enjoy a walk on the <FONT COLOR = "GREEN" >grass</FONT>.**

Let consider the following HTML code (FONT.HTML) for demonstrating the BODY elements.

**<HTML>**

**<HEAD>**

**<TITLE> FONT Attributes</TITLE>**

**<P> Your Name : <FONT SIZE = +2 FACE = "arial, helvetica">Sumeet Rana.**

**</FONT><BR>**

**<P> Your Address : <FONT SIZE = +1 FACE = "times, helvetica">D-10/120, See-U, Saket**

**</FONT><BR>**

**<P> Your Class: <FONT SIZE = +1 FACE = "times, helvetica" COLOR = HRED">XH-D, Computer </FONT><BR>**

**</HTML>**

# NIELIT GORAKHPUR

The above code of FONT.html will display the output as shown in figure bellow.

Your Name : Sumeet Rana.

Your Address : D-10/120, See-U, Saket

Your Class: XH-D, Computer

## Exercise:

- 1: What is the purpose of using <FONT> tag in html code?
- 2: Write HTML code line to set the font size +3 .
- 3: Write HTML code line to set the font color as #ff0011.
