Checking spelling and grammar Tool:

The Spelling and Grammar tool checks either the document from the cursor point onwards, or the text selection.

- By default, four dictionaries are installed for each language: a **spelling checker**, a **grammar checker**, a **hyphenation dictionary**, and a **thesaurus**.
- The spelling checker determines if each word in the document is in the installed dictionary.
- The grammar checker comes in combination with the spelling checker.

Checking spelling automatically:

- When highlighted, the **Automatic Spell Checking** option on the **Tools** menu checks each word as it is typed and displays a wavy red line under any unrecognized words.
- Right-click on an unrecognized word to open a context menu. We can click on one of the suggested words to replace the underlined word with the one selected.
- If the list does not contain the word we want, click **Spelling** to open a dialog. When the word is corrected, the line disappears.

Checking spelling and grammar:

- To perform a combined spelling and grammar check on the document (or a text selection), click the Check Spelling button on the Standard toolbar, or choose **Tools > Spelling**. This checks the document or selection and opens the Spelling dialog if any unrecognized words are found. To also identify potential grammar problems, check the Check grammar box.
Change dictionary language:

- Change the dictionary language (for example, Spanish, French or German) in the Spelling dialog by selecting the appropriate language in the Text language drop-down list.

Add a word to the dictionary:

- Add a word to the dictionary by clicking Add to Dictionary in the Spelling dialog or in the context menu. The word will be added to the Standard dictionary, unless we have created another dictionary in the same language. If you have created a new dictionary, you will be given a choice of dictionaries to add the word to.

Choose text for spell checking:

- Choose whether to check uppercase words or words that contain numbers, by clicking the Options button on the Spelling and Grammar dialog to open a Writing Aids dialog similar to the one in Tools > Options > Language Settings > Writing Aids.

Manage custom dictionaries:

- Create, edit, or delete dictionaries and edit words in the dictionary in the same Writing Aids dialog.

Using synonyms and the thesaurus:

- To access a short list of synonyms, right-click on a word and point to Synonyms on the context menu. A submenu of alternative words and phrases is displayed. Click on a word or phrase in the submenu to have it replace the highlighted word or phrase in the document.
- The thesaurus gives a more extensive list of alternative words and phrases. To use the thesaurus, click on Thesaurus from the Synonyms submenu. If the current language does not have a thesaurus installed, this feature is disabled.

Using AutoCorrect:

- Writer’s AutoCorrect function has a long list of common misspellings and typing errors, which it corrects automatically. For example, “hte” will be changed to “the”. It also includes codes for inserting special characters, emoji, and other symbols.
- AutoCorrect is turned on by default. We may wish to disable some of its features, modify others, or turn it off completely.
- We can add our own corrections or special characters or change those supplied with LibreOffice.
- Choose Tools > AutoCorrect > AutoCorrect Options to open the AutoCorrect dialog.
- On the Replace tab, we can define which strings of text are corrected and how.
To stop Writer replacing a specific spelling, go to the Replace tab, highlight the word pair, and click Delete. To add a new spelling to the list, type it into the Replace and With boxes on the Replace tab, and click New.

See the different tabs of the dialog for the wide variety of other options available to fine-tune AutoCorrect.

To turn AutoCorrect off, uncheck Tools > AutoCorrect > While Typing.

Using Word Completion:

If Word Completion is enabled, Writer tries to guess which word we are typing and offers to complete the word for us. To accept the suggestion, press Enter. Otherwise, continue typing.

To turn off Word Completion, select Tools > AutoCorrect > AutoCorrect Options > Word Completion and deselect Enable word completion.

Using AutoText:

Use AutoText to store text, tables, fields, and other items for reuse and assign them to a key combination for easy retrieval. For example, rather than typing “Senior Management” every time we use that phrase, we can set up an AutoText entry to insert those words when we type “sm” and press F3.

To store some text as AutoText do the following steps:

1) Type the text into the document.
2) Select the text.
3) Choose Tools > AutoText (or press Ctrl+F3).
4) In the AutoText dialog, type a name for the AutoText in the Name box. Writer will suggest a one-letter shortcut, which can change.
5) Choose the category for the AutoText entry, for example My AutoText.

6) Click the AutoText button at the bottom of the dialog and select from the menu either New, to have the AutoText retain specific formatting, no matter where it is inserted, or New (text only), to have the AutoText take on the existing formatting around the insertion point.

7) Click Close to return to the document.

Inserting AutoText
- To insert AutoText, type the shortcut and press F3.

Exercise:
Write short notes on followings:

a. Spelling and Grammar Tool
b. Auto Correct
c. Auto Text
