

Tags of Forms: Forms are another very important element of HTML. We often create a form in our web pages either as an enquiry form or as an enrolment form or as a feedback form or whatever.

A simple form is created in the following way-

```
<form>
  - - - - -
  - - - - -
  form components
  - - - - -
  - - - - -
</form>
```

Following are the components of forms that we create in HTML-

1. Textbox
2. Radio Button
3. Checkbox
4. Date box
5. Drop-down Menu
6. Text area
7. Buttons

The image shows a form with the following components and labels:

- Name:** Your name [input field] → Textbox
- Gender:** Male, Female, Transgender → Radio Button
- Hobbies:** Cycling, Cricket, Movies → Checkbox
- DOB:** mm / dd / yyyy [input field] → Date box
- Qualification:** 10+2 [dropdown menu] → Dropdown Menu
- Your comments-:** Your Comments [text area] → Text area
- Buttons:** Submit, Reset → Buttons

1. Textbox: Textbox is a simple input tool that collects the text. It can be used for name, father's name, mother's name, address etc.

Syntax:

```
<form>
  <b>Name</b> <input type="text">
</form>
```

Here, **Name** is the label. **<input>** is the tag and **type** is the attribute of <input> tag. Some other attributes are as under-

- a) **placeholder:** to give a hint about what to input.
- b) **name:** to give a logical name to the textbox.
- c) **readonly:** to make a textbox read only (un-writable).

Assignment:

1. Try to create some textboxes as under-
