NIELIT Gorakhpur

Course Name: O Level (1st Sem)

<u>Topic: HTML [PART 24]</u> <u>Date: 18-05-20</u>

Subject: WDP

5. Drop-down Menu: Drop-down menus are created to allow the user to select one single choice from a lot of options. For example- states in a country or districts in a state.

Syntax:

```
<b> Your Country </b>
<select name="country">
    <option> India </option>
    <option> Pakistan </option>
    <option> Sri Lanka </option>
    <option> Bangladesh </option>
</select>
```

Here, Your Country is the label.

<select> is the tag for creating a drop-down and <option> is the tag for creating list items.
name is the attribute to <select> tag for defining that the drop-down is for selecting a country.

6. Text area: Text area is an important form component that lets the user input large text. For example- user's feedback etc.

Syntax:

```
<br/><br/><br><textarea rows="20" cols="30"></textarea>
```

Here, Your Feedback is the label.

<textarea> is the tag for creating a larger textbox. rows is the attribute for defining the height and cols is the attribute for defining width.

<u>7.</u> <u>Buttons:</u> Buttons are created as the final component of any form. A button lets the user trigger some events like submission of data, upload/download or any kind of alert/message.

NIELIT Gorakhpur

Syntax:

```
<input type="button" value="submit">
<input type="button" value="reset">
```

Here there is no any label.

<input> is the tag and type is the attribute for defining that the input component is a button. value is another attribute that defines the name of button.

Assignment:

- **1.** Try to create the complete form as given in the PDF file of 14-may-2020.
- **2.** Try to create a form for enrollment of students in a school.
