

## Tags of <head> section:

- <title>**: It is a container tag. It is used to add title to the page. The title is shown in the title bar of browser.

Syntax:

```
<title> Facebook </title>
```

- <link>**: It is an empty tag. It is used to link external files (mostly CSS) to the HTML program.

Syntax:

```
<link rel="stylesheet" href="style1.css">
```

Here rel is acronym for relationship and href is acronym for hypertext reference.

- <script>**: It is a container tag. It is used to link external files (mostly JavaScript) to the HTML program.

Syntax:

```
<script src="file1.js"> </script>
```

Here src is acronym for source.

- <style>**: It is a container tag. It is used to define internal CSS styles to the HTML program.

Syntax:

```
<style>
  p{
    text-align:justify;
    color:red;
    font-size:15px;
  }
</style>
```

**5. <meta>:** It is an empty tag. It is used to define specific information for the convenience of browser while processing or loading the page.

Syntax:

```
<meta charset="UTF-8" name="viewport"  
content="width=device-width, initial-scale=1.0">
```

Here charset="UTF-8" allows Unicode text rendering, width=device-width tells the browser to follow the width of the display device and initial-scale=1.0 sets the initial zoom level as 1.0 when the page is loaded in the browser.

**NOTE:** Though there are many more tags in <head> section but these five are mostly used.

### **Assignments:**

- 1.** What are the similarities and differences between <link> and <script> tags?
- 2.** Why do we use <meta> tag in our HTML programs?
