Do the practical work as given here!

- Write the following code in notepad
- Save it with [filename.html] and
- Open the file in a browser.

```html
<html>

  <head>
    <title> DOEACC SOCIETY</title>
  </head>

  <body bgcolor="gray">

    <h3>Subscript example</h3>
    <p title="Subscript">H<sub>2</sub>SO<sub>4</sub></p>
    <br>
    <h3>Superscript example</h3>
    <p title="Superscript">A<sup>2</sup>+B<sup>2</sup></p>
    <br>
    <h3>Strike example</h3>
    <p title="Strike"><strike>Rs. 1500.00</strike>  Rs. 1000.00</p>
    <br>
    <h3>Teletype example</h3>
    <p title="Teletype">... and your bill is- <tt>Rs. 780.00</tt> . Kindly
pay it asap.</p>
    <br>
    <h3>Font example</h3>
    <p title="Font example">I am in the nationwide <font face="monotype
corsiva" color="red">Lockdown</font> since about one month.</p>

  </body>

</html>
```

NOTE: This code clarifies the tags <sub>, <sup>, <strike>, <tt> and <font>. All these tags are used for working on text while designing a webpage.

 works here for line break.

title="......" has been used with every <p>. Just move your mouse over any of the <p> outputs and you will see a title of that element.

After the code is run, following should be your output.
