CSS on Body:
CSS designs the `<body>` element in the following ways-

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>background-color</td>
<td>Red; / #ff0000; / rgb(255,0,0);</td>
<td>Colors the background</td>
</tr>
<tr>
<td>background-image</td>
<td>url(&quot;paper.gif&quot;);</td>
<td>Puts a background image</td>
</tr>
<tr>
<td>background-repeat</td>
<td>repeat-x;</td>
<td>Repeats the image horizontally</td>
</tr>
<tr>
<td></td>
<td>repeat-y;</td>
<td>Repeats the image Vertically</td>
</tr>
<tr>
<td></td>
<td>repeat-xy;</td>
<td>Repeats the image entirely</td>
</tr>
<tr>
<td></td>
<td>no-repeat;</td>
<td>Does not repeat the image</td>
</tr>
<tr>
<td>background-attachment</td>
<td>fixed;</td>
<td>Background does not scroll</td>
</tr>
<tr>
<td></td>
<td>scroll;</td>
<td>Background scrolls</td>
</tr>
<tr>
<td>background-position</td>
<td>top; / left; / bottom; / right;</td>
<td>Position of the background image</td>
</tr>
</tbody>
</table>

Syntax [background-color]:

```html
<html>
<head>
  <style>
    body {
      background-color: yellow;
    }
  </style>
</head>
<body>
</body>
</html>
```
**Output:**

```
<html>
<head>
  <style>
    body {
      background-color: yellow;
      background-image: url('img1.jpg');
      background-repeat: repeat-x;
    }
  </style>
</head>
<body>
</body>
</html>
```

**Output:**

**NOTE:**

1. As in the second syntax, `background-repeat` has been used with `repeat-x`, `repeat-y` would have repeated the image vertically. Similarly `repeat-xy` would have repeated the image on entire background. A `no-repeat` does not repeat the image.

2. `background-attachment` works on the contents like-headings, paragraphs, images etc. whether to scroll with background or without background.
3. `background-position` positions the image on the background. It is always used with `background-repeat: no-repeat`.

Assignment:

1. practise all the properties of css on `<body>`.
