Tags of <body> section:

1. The <body> tag.
2. Tags of typography.
3. Tags of images
4. Tags of links
5. Tags of tables
6. Tags of lists
7. Tags of forms
8. Tags of frames

1. **The <body> tag:** It is a container tag. It is used to assemble all the code written for the development of webpage.

   Syntax:

   ```
   <body>
        -------
        -------
        -------
   </body>
   ```

   Attributes:

   - **bgcolor**   -   to add a background color. Its value can be any color.

   ```
   <body bgcolor="red">
        -------
        -------
        -------
   </body>
   ```

   - **Background** -   to set background wallpaper. Its value can be any image.

   ```
   <body background="image1.jpg">
        -------
        -------
        -------
   </body>
   ```

   NOTE: Though both attributes are different, however both are often used together.

2. **Tags of typography:** typography refers to the activity related to text typing. All the headings, paragraphs and their formatting undergo this activity. So the tags are:

   a. Heading tags
   b. Paragraph tags
   c. Bold
   d. Italic
   e. Underline
   f. Subscript
   g. Superscript
   h. Strike
   i. Font
   j. Title
   k. Teletype

Assignments:

1. Why do we use <body> tag? What are its attributes?
2. List out any five tags of typography in HTML.
