

Maintenance of CPU Cabinet:

- Must be kept on a stable platform.
- Must be provided with stable power supply.
- Should be kept away of dust and moisture.
- Should be disassembled and reassembled once in a year.
- Must not have any rolling screw inside.
- Must have proper insulation between its inner components.

Maintenance of Display device/Monitor:

- Must be kept on a stable platform.
- Must be provided with stable power supply.
- Should be kept away of dust and moisture.
- Should be cleaned mildly as a harsh touch can damage the LCD displays.

Maintenance of Keyboard/Mouse:

- Should be kept away of dust and moisture.
- Should be cleaned with a brush at least once in a week.
- Must be wired properly to the machine. PS/2 ports need more care.
- Should not be used ruthlessly as keys may go stuck.
- A proper pad should be used for the mouse.

Maintenance of HDD/CD drive/DVD Drive:

- Should be screwed properly in the mounting rack of cabinet.
- Power cable must not be loose.
- SATA or PATA connectivity must be checked regularly. PATA needs more care since no. of pins is 40.
- Should not be formatted frequently.
- Should be cleaned with a brush at least once in a week.
- A lens cleaner should be used for cleaning the lenses of CD/DVD Drives.

Maintenance of UPS:

- Must be kept on a stable platform.
- Must be provided with stable power supply.
- Must be added to the main power even when in use.
- Deep discharge must be avoided.
- Overload must be avoided.

Assignments:

1. Why do we need maintenance of our computer system?
2. List out some tips for maintenance of CPU cabinet.
