<tbody>
<tr>
<td><strong>Instructions for Candidate:</strong></td>
</tr>
<tr>
<td>कृपया प्रश्न-पुस्तिका, ओएमआर शीट एवं उत्तर-पुस्तिका में दिये गए निर्देशों को ध्यान पूर्वक पढ़ें।</td>
</tr>
<tr>
<td>प्रश्न-पुस्तिका की भाषा अंग्रेज़ी है। परीक्षार्थी केवल अंग्रेज़ी भाषा में ही उत्तर देंगे।</td>
</tr>
<tr>
<td>इस मॉड्यूल/पेपर के दो भाग हैं। भाग एक में चार प्रश्न और भाग दो में पाँच प्रश्न हैं।</td>
</tr>
<tr>
<td>भाग एक &quot;वैकल्पिक&quot; प्रकार का है जिसके कुल अंक 40 है तथा भाग दो, &quot;व्यक्तिभाषक&quot; प्रकार हैं और इसके कुल अंक 60 हैं।</td>
</tr>
<tr>
<td>भाग दो के उत्तर, इस प्रश्न-पत्र के साथ दी गई ओएमआर उत्तर-पुस्तिका पर, उसमें दिये गए अंकों के अनुसार ही दिये जाएंगे।</td>
</tr>
<tr>
<td>परीक्षार्थी, उपस्थिति-पत्रिका पर हस्ताक्षर किए बिना एवं अपनी उत्तर-पुस्तिका, निरीक्षक को सीमा बिना, परीक्षा भाग नहीं होगा सन्तुलित।</td>
</tr>
<tr>
<td>परीक्षार्थी, उपस्थिति-पत्रिका पर हस्ताक्षर किए बिना एवं अपनी उत्तर-पुस्तिका, निरीक्षक को सीमा बिना, परीक्षा भाग नहीं होगा सन्तुलित।</td>
</tr>
<tr>
<td>प्रश्न-पुस्तिका को खोलने के निर्देश मिलने के पश्चात एवं उत्तर देने से पहले उपनिदेश यह जानें कि प्रश्न-पुस्तिका प्रत्येक भाग के उपरेंटिका से संपूर्ण है।</td>
</tr>

</table>

**जब तक आपसे कहा न जाए तब तक प्रश्न-पुस्तिका न खोलें।**

**DO NOT OPEN THE QUESTION BOOKLET UNTIL YOU ARE TOLD TO DO SO.**
PART ONE
(Answer all the questions)

1. Each question below gives a multiple choice of answers. Choose the most appropriate one and enter it in the “OMR” answer sheet supplied with the question paper, following instructions therein. (1x10)

1.1 What will be output if you compile and execute the following 'C' code?
```c
void main(){
float a=5.2;
if(a==5.2)
    printf("Equal");
else if(a<5.2)
    printf("Less than");
else
    printf("Greater than");
}
```
A) Equal  B) Less than  C) Greater than  D) Compilation error

1.2 What will be output if you compile and execute the following 'C' code?
```c
void main(){
int i=4,x;
x=++i + ++i + ++i;
printf("%d",x);
}
```
A) 21  B) 18  C) 12  D) Compilation error

1.3 The following code ‘for(;;)’ represents an infinite loop. It can be terminated by.
A) break  B) exit(0)  C) abort()  D) All of the mentioned

1.4 Arguments that take input by user before running a program are called?
A) main function arguments  B) main arguments  C) Command-Line arguments  D) Parameterized arguments

1.5 Automatic variables are allocated memory in
A) heap  B) Data segment  C) Code segment  D) stack.

1.6 End of file is detected by
A) fend()  B) endf( )  C) EOF  D) FEND

1.7 If the first string and the second string both are identical, then strcmp function returns
A) a value of 0  B) either 1 or 0  C) a value of 1  D) any positive integer

1.8 Register variable are active
A) outside the function  B) throughout the program  C) only in the function where it is defined  D) surrounding of that function

1.9 What will be the output of following program
```c
#include
main()
{
    int x,y = 10;
x = y * NULL;
    printf("\n %d \n", x);
}
```
A) error  B) 0  C) 10  D) Garbage value

1.10 What is the output of this C code?
```c
#include <stdio.h>
void main()
{
    static int x;
    if (x++ < 2)
        main();
}
```
A) Infinite calls to main  B) Run time error  C) Varies  D) main is called twice

2. Each statement below is either TRUE or FALSE. Choose the most appropriate one and enter your choice in the “OMR” answer sheet supplied with the question paper, following instructions therein. (1x10)

2.1 Are the expression *ptr++ and ++*ptr are same?
2.2 3 += 3; evaluates to 6.
2.3 The default precision for printing of floating point values is 6. If the floating-point number is more precise than 6 digits, it will be rounded.
2.4 The following block of code sums up an input series of grades (terminated by -1).
```c
while( grade != -1 )
    total = total + grade;
    counter = counter + 1;
    printf( "Enter grade, -1 to end: ");
    scanf( "%d", &grade );
```
2.5 A double data type number uses 64 bits giving a precision of 14 digits.
2.6 Every C program must have at least one main () function section.
2.7 The precedence of arithmetic operators is (from highest to lowest)
```c
%, *, /, +, –
```
2.8 Is the following statement valid in C?
```c
int my_num=100,000;
```
2.9 void (*ptr)(int); ptr is ptr is pointer to int that converts its type to void.
2.10 We need to recompile the program before executing it even if there is no change in the source code.
3. Match words and phrases in column X with the closest related meaning/word(s)/phrase(s) in column Y. Enter your selection in the “OMR” answer sheet supplied with the question paper, following instructions therein. (1x10)

<table>
<thead>
<tr>
<th>X</th>
<th>Y</th>
</tr>

4.1 A single line comment in C language source code can begin with ________.
4.2 ________ is a logical OR operator.
4.3 ________ int fun(); - The declaration indicates the presence of a global function defined outside the current module or in another file.
4.4 ________ function that is most appropriate for reading in a multi-word string.
4.5 ________ operator is used to continue the definition of macro in the next line.
4.6 ________ is a inbuilt library function to adjust the allocated dynamic memory size.
4.7 The library function ________ finds the first occurrence of a substring in another string.
4.8 #define allow us to define ________.
4.9 ________ is a way to promote from lower to higher data type.
4.10 A pointer in C which has not been initialized is known as ________ pointer.
PART TWO
(Answer any FOUR questions)

5.  
a) Write a ‘C’ program to swap two variables without using third variable.  
b) What are merits and demerits of array in ‘C’?  
c) Write a ‘C’ program in which a scanf() function can read a complete paragraph of text.  

   (5+5+5)

6.  
a) What is difference between pass by value and pass by reference?  
b) Write a function in ‘C’ to print even numbers from 1 to 100.  
c) Write a ‘C’ program to find whether a number is palindrome or not.  

   (4+5+6)

7.  
a) Write a program to reverse an array of numbers.  
b) Define array and link list. Give one example for each showing its usage.  
c) Write a program to delete an element from a given location of an array of integers.  

   (5+5+5)

8.  
a) Write a ‘C’ Program to find Sum of lower triangular elements in a matrix.  
b) Write a ‘C’ Program to find substring of string without using Library Function.  
c) How can you create your own header file in ‘C’ programming? Briefly explain.  

   (5+5+5)

9.  
a) Write down three different methods used for referencing multiple values from a function.  
b) Write a ‘C’ program to read following details of 50 students.  

   **Student Name, Student Roll No, Class**  
   Display total number of students studying in class “BCA”.  
c) Write two main differences between structure and union.  

   (5+6+4)
