## Processor based System Design

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
</table>
| 1.     | **Processor Fundamentals**  
Introduction to Processor architecture and programmer's model, Introduction to Processor Instruction Set Architecture, Interrupt mechanisms and Exception handling, Cross compilation |
| 2.     | **System Development**  
Tool chains and Development environments |
| 3.     | **System Programming**  
Programming using Assembly, C and Mixing the Assembly and C programming |
| 4.     | **Processor Interfacing**  
Interfacing switches, LCD, Keyboard, IO programming, etc. through processor ports, Generating delays and PWM using timers, and Watchdog mechanism |
| 5.     | **Serial and other Interfacing**  
Working with PC and RS-232, Serial Peripheral interfacing through I2C, SPI etc, Interfacing with Memory, Providing Reset and Clock on a board |
| 6.     | **Complete System**  
Interacting with real world using ADC and DAC |

# Syllabus for Course on PCB DESIGN

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
</table>
| 1.     | **PCB BASIC PRINCIPLE**  
                        Specification and classification of PCBs  
                        • Techniques of layout design  
                        • Artwork generation Methods - manual and CAD  
                        • General design factor for digital and analog circuits  
                        • Layout and Artwork making for SS, DS and ML Boards  
                        • Design for manufacturability  
                        • Specification design standards |
| 2.     | **PCB FABRICATION**  
                        Introduction to PCB technology  
                        • PCB Fabrication techniques-single, double sided and multilayer  
                        • Etching: chemical principles and mechanisms  
                        • Post operations- stripping, black oxide coating and solder masking  
                        • PCB component assembly processes |
| 3.     | **TRANSMISSION LINES**  
                        Transmission lines and their parameters  
                        • Fundamental electrical concepts  
                        • Transmission lines and wave propagation  
                        • Current paths on a PCB return current  
                        • Attenuation of signals on lines skin effect, loss tangent  
                        • Coupling, mutual capacitance and mutual inductance  
                        • Power distribution. Power requirements  
                        • Coping with changing currents. Board level de- coupling - limitations  
                        • Component level de-coupling  
                        • Impedance Control |
| 4.     | **CROSSTALK**  
                        The crosstalk in transmission lines  
                        • Capacitive and inductive crosstalk Dependence on edge rate  
                        • Coupling factor. Ground plane effects Forward and backward crosstalk  
                        • Crosstalk control in PCB design parts, planes, tracks, connectors, terminations  
                        • Minimization of crosstalk. |
| 5.     | **CONNECTORS, PACKAGES AND VIAS**  
                        Effects of inductively coupled connector pin fields  
                        • Connector design guidelines Discontinuities reflections, critical length, |
connectors and Vias

6. **DESIGN METHODOLOGIES**
   - Simulation reference loads
   - Signal integrity
   - Lines, loads and track routing
   - Effect of impedance and loading on signal propagation delay
   - Load distribution and topology
   - Merits of different schemes
   - General routing and termination considerations

7. **MIXED MODE PCB DESIGN**
   - Mixing RF and digital on the same PCB
   - Mixing analog (audio) and digital signals on the same PCB

# Syllabus for Embedded System Design

## Indicative List of Contents

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Contents</th>
</tr>
</thead>
</table>
| 1       | **Introduction:**  
> - What is Embedded System?  
> - Microprocessor vs Microcontroller  
> - CISC vs RISC |
| 2       | **Overview of Architecture of ATMEGA16:**  
> - Processor Core and Functional Block Diagram  
> - Description of memory organization  
> - Overview of ALL SFR’s and their basic functionality  
|         | **Low Level programming Concepts:**  
> - Addressing Modes  
> - Instruction Set and Assembly Language programming(ALP)  
> - Developing, Building, and Debugging ALP’s  
|         | **Middle Level Programming Concepts:**  
> - Cross Compiler  
> - Embedded C language implementation, programming,& debugging  
> - Differences from ANSI-C  
> - Library reference  
> - Use of #pragma directive  
> - Functions, Parameter passing and return types  
|         | **On-Chip Peripherals Study, Programming, and Application:**  
> - Ports: Input/Output  
> - Timers & Counters  
> - UART  
> - Interrupts  
> - SPI  
> - Analog Comparator  
|         | **External Interfaces Study, Programming and Applications :**  
> - LEDs  
> - Switches(Momentary type, Toggle type)  
> - Seven Segment Display: (Normal mode, BCD mode, Internal Multiplexing & External Multiplexing)  
> - LCD (8bit, 4bit, Busy flag, custom character generation)  
> - Keypad Matrix  
|         | **Protocols Study, Programming and Applications :**  
> - I2C (EEPROM and RTC)  
> - SPI (EEPROM)  
> - I Wire(Sensor)  
> - Infrared Communication(RC5 protocol)  
| 3       | **Philips LPC2000 series (The ARM7 CPU Core Based Microcontroller)**  
> **Outline architecture:**  
> - The Pipeline  
> - Registers  
> - Current Program Status Register  
> - Exception Modes  
|         | **The ARM 7 Instruction Set** |
- Branching
- Data Processing Instructions
- Copying Registers
- Copying Multiple Registers
- Swap Instruction
- Modifying The Status Registers
- Software Interrupt
- MAC Unit
- THUMB Instruction Set

**System Peripherals**
- Bus Structure
- Memory Map
- Register Programming
- Memory Accelerator Module
- Memory Map Control
- Bootloader
- External Bus Interface
- External Memory Interface
- Phase Locked Loop
- VLSI Peripheral Bus Divider
- Pin Connect Block
- External Interrupt Pins
- Interrupt Structure

**Software Development**
- uVision IDE: Embedded C
- Startup Code
- Interworking ARM/THUMB Code
- Locating Code In RAM
- Inline Functions
- Fixing Objects At Absolute Locations
- Inline Assembler

### Accessing User Onchip Peripherals
- General Purpose I/O
- General Purpose Timers
- Watchdog
- PWM Modulator
- Real Time Clock
- UART
- I2C Interface
- SPI Interface
- Analog To Digital Converter
- Interrupt Service Routines
- Software Interrupt
- Hardware Debugging Tools

- String Searching
- Character Conversions and testing: <ctype.h>
- Memory Operations: <memory.h>

7 Structures and Unions
- Structures
- Nested Structures
- Array of Structures
- Allocation of memory and holes
- Unions

8 Further Data Types
- Coercion or Type-Casting
- Enumerated Types
- Static Variables

9 Dynamic Memory Allocation & Dynamic Structures
- Malloc, Sized, and Free
- Calloc and Realloc

10 Advanced Pointer Topics
- The purpose of pointers
- Defining pointers
- The & and * Operators
- Pointer Assignment
- Pointers with functions
- Pointer Arithmetic
- Advanced pointer types
- Pointers to functions
- Pointers to String
- Pointers and Dynamic memory
- Pointers and Structures
- Common Pointer Pitfalls
  - Not assigning a pointer to memory address before using it
  - Illegal indirection

11 Storage Classes
- Scope
- Internal
- External
- Automatic
- Static
- Scope and extent of parameters

12 Low Level Operators and Bit Fields
- Bitwise Operators
- Bit Fields
  - Bit Fields: Practical Example
  - A note of Caution: Portability

## Microprocessor/Microcontroller based System Design (focused around AVR and ARM)

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
</table>
| 1.      | **Microprocessor/Microcontroller System Design**  
  - Components of a microprocessor system.  
  - Embedded systems vs general-purpose computer  
  - Design methodologies available to implement an embedded microprocessor system. |
| 2.      | **Microprocessor/Microcontroller Organization**  
  - Programming Models  
  - RISC vs CISC  
  - Memory Architectures used |
| 3.      | **Development tools and Environments**  
  - Syntax of assembly, working with tool chain, purpose of various files (list, map, hex files)  
  - Debugging tools  
  - Phasing of Embedded system design |
| 4.      | **Microprocessor/Microcontroller Instruction set, Assembly Programming**  
  - Addressing Modes, Assembler Directives, Processor Modes for accessing registers, memory and I/O  
  - Word length and alignment issues  
  - Developing programs to do Data processing and Arithmetic operations  
  - Hardwired stack vs Soft Stack |
| 5.      | **Interrupts and Exception in Microprocessor/Microcontroller**  
  - Polling vs Interrupt driven programming  
  - Writing ISR to do specified task |
| 6.      | **Microprocessor/Microcontroller Supporting Circuits (I/O subsystems)**  
  - Clocking Options available |
- Power Down Modes
- Pins Configurations (Time multiplexed vs Configurable pins)
- GPIO
- Decoding Logic of IO devices

### 7. Microprocessor/Microcontroller Peripheral Devices

- Timers
- PWM
- DMA controllers

### 8. Memory System Design for Microprocessor/Microcontroller

- Characteristics of RAM/ROM
- Working with EPROM, SRAM devices
- Address Decoding and Memory map design

### 9. Interfacing Microprocessor/Microcontroller with

Switches, Keypads, Displays
Serial I/O
Analog Signals

Syllabus for Computer Networks

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td><strong>INTRODUCTION</strong>&lt;br&gt;Historical perspective, theoretical and practical models of network architecture particularly the ISO OSI seven layer model and the TCP/IP protocol stack. Example networks and services including prototype new technologies. These would include Frame Relay, ISDN, ATM, WiFi, xDSL, WiMAX, 2G and 3G.</td>
</tr>
<tr>
<td>2.</td>
<td><strong>DIGITAL COMMUNICATION</strong>&lt;br&gt;Physical properties of copper media, fibre optics, radio communication, and data communication standards. Maximum data rates (theoretical and practical) for different media including some simple analysis of signals. Data encoding of digital signals. The distinction between, and analysis of, physical media and wireless media properties. The difference between narrow band and broad band technologies with particular reference to ISDN and xDSL.</td>
</tr>
<tr>
<td>3.</td>
<td><strong>LOCAL AREA NETWORKS</strong>&lt;br&gt;Types of LAN covering standards, topology and performance. Example architectures such as ethernet and fast ethernet, ATM, and WiFi. The operation of LAN switches and the configuration of virtual LANs.</td>
</tr>
<tr>
<td>4.</td>
<td><strong>WIDE AREA NETWORKS</strong>&lt;br&gt;Circuit versus packet switching and associated routing and flow control. Detailed examples of existing architectures such as Frame Relay, ISDN, ATM, Multi-protocol Label Switching (MPLS) and Virtual Private Networks (VPN).</td>
</tr>
<tr>
<td>5.</td>
<td><strong>INTER NETWORKS</strong>&lt;br&gt;Principles of inter networking, architectures, addressing and protocols. Particular reference to IPv4, IPv6, TCP and UDP.</td>
</tr>
<tr>
<td>6.</td>
<td><strong>ERRORS</strong></td>
</tr>
</tbody>
</table>
The main causes of errors and their effects on transmission. Single bit and burst errors. Various error detection and correction strategies including parity, block sum, Hamming Codes, Cyclic Redundancy Checks and Forward versus Backward error control. Statistical analysis of the effectiveness of error detection and correction code.

<table>
<thead>
<tr>
<th>7.</th>
<th>QUALITY OF SERVICE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A definition of quality of service and the main parameters that define network performance. Router functionality including frame prioritisation, classification and queue management techniques. The provision of quality of service management in practical networks such as Frame Relay, ATM and the Internet.</td>
</tr>
</tbody>
</table>
# Syllabus of Electronic Systems Packaging

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
</table>
| 1.      | **Packaging of Electronic Systems**  
| 2.      | **Manufacture of chips and boards**  
| 3.      | **Thermal design of chips and boards**  
| 4.      | **Design of HDI PWBs for Manufacturability, Reliability and Testability**  
Design Rules for Analog Circuits, Design Rules of Digital Circuits, Design Rules for High Frequency Circuits, Design Rules for Power Electronic Circuits, Need of High Density Interconnection Structures, Drivers for HDI, HDI via structures effect on PCB design flexibility, constraints and cost, Need for HDI structures using microvias, Drilling, Vias, Microvias, Staggered Sequential Microvia Build-up, Stacked Sequential Microvia Build-up, Co-Laminated Any Layer Microvia Build-up, PCB Basis, PCB Basis, Setting Up HDI |
Routing, Design a four layer high density and high performance PCB using PCB CAD, Characteristics of a Package, Thermal performance, Signal integrity Power distribution, Manufacturability, Testability, Reliability

| 5. | **Design of Interconnections**  
Design high frequency interconnections on PCBs, Performance of interconnections at high frequencies |

| 6. | **Electromagnetic Compatibility**  
Electromagnetic interference in electronic systems and its impact, Types, Susceptibilities of different radio technologies, Interference to consumer devices and systems, Analyze the electronic circuit from the noise emission point of view (both conducted and radiated emission) cross talk and reflection behavior of the circuit in time domain,. Design a power supply distribution network for the digital and analog circuits |

# Syllabus of Fiber Optics Interconnections

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>
</tr>
</thead>
</table>
| 1.      | **Optical Fiber**  
Fundamentals of Optical Fibers, Single Mode and Multimode Fibers, Losses and Dispersion in Optical Fibers, Optical Fiber cables, Connectorisation and splicing |
| 2.      | **Sources**  
LED and lasers as sources for optical fiber link, their characteristics and properties. |
| 3.      | **Detectors**  
Detectors in optical fiber link (PIN and Avalanche Detector) and their characteristics.  
Testing and maintenance of optical links |
| 4.      | **Measuring Equipment**  
Study of Power Meter, Attenuator, OTDR etc. |

Reference Books:

## Course Syllabus for OS and Device Driver Development for Embedded System

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Contents</th>
</tr>
</thead>
</table>
| 1       | **Overview of Operating System**  
Introduction to Operating system, Role of Operating System as resource manager, function of kernel and shell, operating system structures, views of an operating system.  

**Process management:** CPU scheduling, Scheduling Algorithms, PCB, Process synchronization, Deadlocks, Prevention, Detection and Recovery  

**Memory Management:** Overlays, Memory management policies, Fragmentation and its types, Partitioned memory managements, Paging, Segmentation, Need of Virtual memories, Page replacement Algorithms, Concept of Thrashing  

**Device Management:** I/O system and secondary storage structure, Device management policies, Role of I/O traffic controller, scheduler  

**File Management:** File System Architecture, Layered Architecture, Physical and Logical File Systems, Protection and Security:  

Brief study to multiprocessor and distributed operating systems  

**LINUX Basics**  

**Introduction to linux operating system**  
- operating system services  
- why linux  

**Different types operating systems**  
- Monolithic  
- Micro etc  

**Basic linux user commands**  

**Linux root file system structure.**  

**Introduction to GNU Tool chain**  
- GCC compiler  
- Make file  
- GDB.  

| 3       | **Introduction to Device Drivers - Module Programming**  
- The role of the device driver  
- Classification of Devices and Modules  
- Building and running Modules  
- Hello world Module  
- Process context, interrupt context, Kernel timers  
- The Linux device model (devices, udev.sysfs.procfhs)  
- Character Driver basics  

**Writing Device Driver Programming in Linux.**  
- Open, Read, Write and Close System Calls  
- Major and Minor Numbers  
- Character Device Data structures  
- Character Device Registration |
- Writing Simple Character Device Driver
- Debugging by Printing, Concurrency and Race Conditions (Semaphores, Mutexes, Completions, Spinlocks)
- Advance char device operations (ioctl), Kernel Timer
- I/O Ports and I/O Memory - Writing Parallel port driver Interfacing With LED, Seven Segment Display.
- Interrupt Handling With Parallel Port
- UART Driver

**Kernel Configuration and Compilation for 0x86**

**Requirements for Building and using the kernel,**

- Retrieving the Kernel Source
- Configuring and Building, Installing and Booting from a Kernel
- Upgrading a kernel, Customizing a Kernel
- Boot loader - Grub Loader, U-Boot

**Implementing Device driver application program related to the Driver**

- Interaction between the User and Kernel Level With System calls
- Explain Device driver application flowchart
- Explain kernel Device driver and user device driver program

---

**Reference Books:**

1. Operating System Principles by Abraham Silberschatz, Peter Baer Galvin, Greg Gagne
2. Beginning Linux Programming by Niel Matthew and Richard Stones
3. Linux Kernel Development by Rober Love
## Syllabus on Course for AUTOCAD

<td>- Changing an Object's Lay</td>
</tr>
</tbody>
</table>
Advanced Object Types

- Drawing Arcs
- Drawing Polylines
- Editing Polylines
- Drawing Polygons
- Drawing Ellipses

2. Second Step

Getting Information from Your Drawing

- Working with Object Properties
- Measuring Objects

Advanced Editing Commands

- Trimming and Extending Objects
- Stretching Objects
- Creating Fillets and Chamfers
- Offsetting Objects
- Creating Arrays of Objects

Inserting Blocks

- What are Blocks?
- Inserting Blocks
- Working with Dynamic Blocks
- Inserting Blocks with DesignCenter
- Inserting Blocks with Content Explorer

Setting Up a Layout

- Printing Concepts
- Working in Layouts
- Copying Layouts
- Creating Viewports
- Guidelines for Layouts

Printing Your Drawing

- Printing Layouts
- Printing from the Model Tab

Text

- Working with Annotations
- Adding Text in a Drawing
- Modifying Multiline Text
<table>
<thead>
<tr>
<th>Formatting Multiline Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adding Notes with Leaders to Your Drawing</td>
</tr>
<tr>
<td>Creating Tables</td>
</tr>
<tr>
<td>Modifying Tables</td>
</tr>
</tbody>
</table>

**Hatching**

- Hatching
- Editing Hatches

**Adding Dimensions**

- Dimensioning Concepts
- Adding Linear Dimensions
- Adding Radial and Angular Dimensions
- Editing Dimensions

<table>
<thead>
<tr>
<th>3.</th>
<th>Adding Efficiency</th>
</tr>
</thead>
</table>

**Working Effectively with AutoCAD**

- Creating a Custom Workspace
- Using the Keyboard Effectively
- Object Creation, Selection and Visibility
- Working in Multiple Drawings
- Copying and Pasting Between Drawings
- Using Grips Effectively
- Additional Layer Tools

**Accurate Positioning**

- Coordinate Entry
- Locating Points with Tracking
- Construction Lines
- Placing Reference Points

**Parametric Drawing**

- Working with Constraints
- Geometric Constraints
- Dimensional Constraints

**Working with Blocks**

- Creating Blocks
- Editing Blocks
- Removing Unused Elements
- Adding Blocks to Tool Palettes
<table>
<thead>
<tr>

<th>Adding a Wipeout</th>
</tr>
</thead>
</table>

### Working with Tables

- Working with Linked Tables
  - Using the Data Link Manager
  - Updating Table Links
- Creating Table Styles
  - Cell Style Option

### Dynamic Blocks

- Working with Dynamic Blocks
  - Inserting Dynamic Blocks
  - Modifying Dynamic Blocks
- Creating Dynamic Block Definitions
- Dynamic Block Authoring Tools
  - Block Editor Contextual Tab
  - Parameters
  - Actions
  - Parameter Sets
  - Constraints
  - Labeling Parameters
  - Testing the Block
  - Construction Geometry
  - Constraints in Dynamic Blocks
  - Creating a Block Table
- Additional Visibility Options

### Attributes

- Inserting Blocks with Attributes
  - What are Attributes?
  - How Attribute Values Are Entered
  - Attribute Visibility
- Editing Attribute Values
  - Editing Attributes One at a Time
  - Editing Multiple Attribute Values
- Defining Attributes
  - Attribute Definition
  - Associating Attributes with Blocks
- Redefining Blocks with Attributes
  - Updating Blocks with New Attributes
- Extracting Attributes

### Output and Publishing

- Output for Electronic Review
  - Plotting Electronic Files
  - Exporting DWF or PDF Files
- Autodesk Design Review
  - Viewing Markups in AutoCAD

Creating a Title Label Block
Creating a Callout Block

Managing Layers

- Working in the Layer Properties Manager
  - Displaying Columns in the Layer Properties Manager
  - Layer Settings
- Creating Layer Filters
  - Using the Filter Tree
  - Property Filters
  - Group Filters
- Setting Layer States

7.

Things not to be left

CAD Standards

- CAD Standards Concepts
  - Creating a Standards File
- Configuring Standards
  - Plug-ins
  - CAD Standards Status Bar Icon
  - Notes
- Checking Standards
  - CAD Standards Settings

System Setup

- Options Dialog Box
- System Variables
- Dynamic Input Settings
  - Renaming Named Objects
  - Drawing Recovery and Repair
  - Checking a Drawing's Status
- Managing Plotters
  - Add Plotter Wizard
  - Plotter Manager
  - Plotter Configuration Editor
- Plot Styles
  - Concepts
  - Types of Plot Style Tables
  - Creating Plot Style Tables
  - Attaching Plot Style Tables to Layouts
Customization

Introduction to Customization

- Why Customize?
  - Customization Guidelines
- What Can Be Customized?
- Creating a Custom Workspace

Customizing the User Interface

- Using the Customize User Interface (CUI) Dialog Box
  - Overview of the CUI Interface
- Customizing the Ribbon
  - Customize User Interface Dialog Box
  - Ribbon Contextual Tabs
  - Ribbon Fold Panels
- Customizing the Quick Access Toolbar
  - Multiple Quick Access Toolbars
- Customizing Menus
  - Controlling Menus in Workspaces
  - Modifying Shortcut Menus
- Creating Custom Toolbars
- Keyboard Shortcuts
  - Mouse Buttons
  - Customizing Double-Click Actions

Macros & Custom Routines

- Custom Commands and Macros
  - Creating a New Command
  - Command Macro
  - Special Characters used in Macros
  - Button Image
- Running Scripts
- Action Recorder
- Editing Action Macros
  - Working with the Action Macro Manage
  - Establishing a Base Point
  - Specifying Playback Values
- Loading Custom Routines
  - Loading Routines
  - APPLOAD Options
# Syllabus for Computer Service and Maintenance

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Content</th>

</tbody>
</table>
- Interfacing proximity sensor with PLC
- Interfacing with Relay
- Control circuit designing with feedback concept

### 4. LADDER LOGIC PROGRAMMING

- Comparison b/w Gates, Relay Logic & ladder logic
- Description of using Memory bit in a programming
- Mathematical Concept ADD, SUB, MUL, DIV and etc
- Logical Concept AND, ANI, OR, ORI, EXOR, NOT etc
- Special Function MOV, SET, RST, CMP, INC, DEC
- Programming based on Timer And Counter

### 5. GETTING FAMILIAR WITH SCADA

- Introduction to SCADA Software
- Creating new SCADA Project
- GUI Designing
- Tag Substitutions
- Dynamic Process Mimic
- Real Time Trend
- Historical Trend
- How to create Alarms & Event
- Recipe Management
- Introduction to graphic Properties like Sizing, Blinking, Filling, Analog Entry, Movement of Objects, Visibility etc.
- Net DDE Communication
- Application of scripts
- Communication with PLC

### 6. WORKING WITH DIFFERENT SCADA TOOLS

- Introduction to other SCADA
- Communication through DDE/OPC/DIRECT driver.
- Various other related properties

### 7. Project work
Reference Books:

2. Number of down able available for SCADA
