About Course

The course aims to equip the students with tools for programming interactive applications using input from the physical world. Goal is to learn basic programming skills that are needed for Smart Technology and New Media, for screen-based applications embedded applications.

Course Objective

The learner will learn how the Arduino platform works in terms of the physical board & libraries and the IDE. Further, the learner will learn about shields, which are smaller boards that plug into the main Arduino board to perform other functions such as sensing light, heat.
