B2.1-R5 : COMPUTER BASED NUMERICAL AND STATISTICAL METHODS

NOTE :

1. **Answer question 1 and any FOUR questions from 2 to 7.**
2. **Parts of the same question should be answered together and in the same sequence.**
3. **Probability Tables are allowed.**
4. **Only Non-programmable and Non-storage type Scientific Calculator is allowed.**

Total Time : 3 Hours **Total Marks : 100**

1. (a) The time taken by the driver to react to the brake is normally distributed having mean value 1.25 second and standard deviation of 0.46 second. What is the probability that reaction time of the driver is in between 1 second and 1.75 second ?

(b) Let X denote the number of traps (defects of a certain kind) in a particular type of metal oxide semiconductor transistor, and suppose it has a Poisson distribution with mean 2. What is the probability that there are exactly three traps and the probability that there are at most three traps ?

(c) Suppose 25% of all students at a large public university receive the financial aid. Let X be the number of students in a random sample of size 50. Then what is the probability that at most 10 students receive financial aid ?

(d) A coin was tossed 400 times and the head turned up 212 times. Test the hypothesis that the coin is unbiased.

(e) The nine items of a sample have the following values 45, 47, 50, 52, 48, 47, 49, 53, 51. Does the mean of these values differ significantly from the assumed mean 47.5 ?

(f) The regression lines of y on x and x on y are respectively $y = ax + b$, $x = cy + d$. Shown that

$$\frac{\sigma_y}{\sigma_x} = \frac{\sqrt{a}}{c},\ \bar{x} = \frac{bc + d}{1 - ac} \text{ and } \bar{y} = \frac{ad + b}{1 - ac}$$

(g) Using the Taylor's Series, find $y(0.1)$ correct to four decimal places if $y(x)$ satisfies the initial value problem $\frac{dy}{dx} = x - y^2$ and $y(0) = 1$. Also find $y(0.2)$.

(7x4)

2. (a) A news magazine publishes three columns entitled Art (A), Books (B), Cinema (C). Reading habits of a randomly selected reader with respect to these columns are :

Read Regularly	A	B	C	$A \cap B$	$A \cap C$	$B \cap C$	$A \cap B \cap C$
Probabilities	0.14	0.23	0.37	0.08	0.09	0.13	0.05

(i) The probability that the selected individual regularly reads the Art column given that he or she regularly reads atleast one of the other two columns.

(ii) The probability that the selected individual regularly reads the Art column given that he or she reads atleast one of the given columns.

(iii) The probability that the selected individual reads atleast one of the first two columns given that he or she reads the cinema column.

(b) An electronic store sells three different brands of DVD players. Among the sales, 50% are brand 1, 30% are brand 2, and 20% are brand 3. Each manufacturer offers a 1-year warranty on parts and labor. It is known that 25% of brand 1 DVD players require warranty repair work, whereas the corresponding percentages for brand 2 and 3 are 20% and 10%. Find :

(i) What is the probability that a randomly selected purchaser has bought a brand 1 DVD player that will need repair while under warranty ?

(ii) What is the probability that a randomly selected purchaser has a DVD player that will need repair while under warranty ?

(iii) If a customer returns to the store with a DVD player that needs warranty repair work, what is the probability that it is a brand 1 DVD player ? **(9+9)**

3. (a) An auditor claims that 8% of customer ledger accounts are carrying mistakes of posting and balancing. A random sample of 500 was taken to test the accuracy of posting and balancing and 20 mistakes were found. Are these sample results consistent with the claim of auditor ? (Use 5% level of significance)

(b) A machine produced 15 defective articles in a batch of 500. After overhauling it produced 2 defectives in a batch of 100. Has the machine improved ? Validate statistically.

(c) The mean weight obtained from a random sample of size 100 is 60 gms. The standard deviation of the weight distribution of the population is 3 gms. Test the statement that the mean weight of the population is 65 gms at 5% level of significance. Also set up 99% confidence limits of the mean weight of the population. **(6+6+6)**

4. (a) When the first proof of 392 pages of a book of 1200 pages were read, the distribution of printing mistakes were found to be as follows :

No. of mistakes in a page (x)	0	1	2	3	4	5	6
No. of pages (f)	275	72	30	7	5	2	1

Fit a Poisson distribution to the above data and test the goodness of fit.

(b) Determine the constants a and b by the method of Least Squares such that $y = ae^{bx}$ fits the following data :

x	2	4	6	8	10
y	4.077	11.084	30.128	81.897	222.62

(9+9)

5. (a) Find a positive real root of $x - \cos x = 0$ by bisection method, correct up to four decimal places between 0 and 1.

(b) Using the method of false position, find the root of equation $x^6 - x^4 - x^3 - 1 = 0$ correct up to four decimal places. **(9+9)**

6. (a) Show that the equation $f(x) = \cos\left[\frac{\pi(x+1)}{8}\right] + 0.148x - 0.9062 = 0$ has one root in the interval $(-1, 0)$ and one in $(0, 1)$. Calculate the root correct to four decimal places using Newton-Raphson method.

(b) Solve the following system of equations using the Jacobi Iterative method :

$4x + y + 3z = 17, \ x + 5y + z = 14, \ 2x - y + 8z = 12$ **(8+10)**

7. (a) Evaluate $I = \int_0^2 \frac{dx}{1+x^2}$ using Simpson's $\frac{1}{3}^{rd}$ rule. How long should n be chosen in order to ensure that $|E| \leq 5 \times 10^{-6}$?

(b) If Trapezoidal rule is to be used to compute $\int_0^1 e^{-x^2}\, dx$ with an error at most $\frac{1}{2} \times 10^{-4}$, then how many points should be used to get desired accuracy ?

(c) By the use of the Newton's Divided Difference formula find the $f'(1.3)$ and $f''(1.3)$ from the following table :

x	1.0	1.2	1.4	1.6	1.8	2.0
$f(x)$	0.0	0.1280	0.5540	1.2960	2.4320	4.0

(6+6+6)

Values of $e^{-\lambda}$

$(0 < \lambda < 1)$

λ	0	1	2	3	4	5	6	7	8	9
0.0	1.0000	.9900	.9802	.9704	.9608	.9512	.9418	.9324	.9231	.9139
0.1	.9048	.8958	.8869	.8781	.8694	.8607	.8521	.8437	.8353	.8270
0.2	.8187	.8106	.8025	.7945	.7866	.7788	.7711	.7634	.7558	.7483
0.3	.7408	.7334	.7261	.7189	.7118	.7047	.6977	.6907	.6839	.6771
0.4	.6703	.6636	.6570	.6505	.6440	.6376	.6313	.6250	.6188	.6126
0.5	.6065	.6005	.5945	.5886	.5827	.5770	.5712	.5655	.5599	.5543
0.6	.5488	.5434	.5379	.5326	.5273	.5220	.5169	.5117	.5066	.5016
0.7	.4966	.4916	.4868	.4819	.4771	.4724	.4677	.4630	.4584	.4538
0.8	.4493	.4449	.4404	.4360	.4317	.4274	.4232	.4190	.4148	.4107
0.9	.4066	.4025	.3985	.3946	.3906	.3867	.3829	.3791	.3753	.3716

$(\lambda = 1, 2, 3, \ldots, 10)$

λ	1	2	3	4	5	6	7	8	9	10
$e^{-\lambda}$	.36788	.13534	.04979	.01832	.006738	.002479	.000912	.000335	.000123	.000045

Note: To obtain values of $e^{-\lambda}$ for other values of λ, use the laws of exponents.

Example: $e^{-3.48} = (e^{-3.00})(e^{-0.48}) = (0.04979)(0.6188) = 0.03081$.

Table 7. Critical Values of the Kolmogorov-Smirnov One Sample TestStatistics

This table gives the values of $D^{+}_{n.a}$ and $D_{n.a}$ for which $\alpha \geq P\{D^{+}_{n} > D^{+}_{n.\alpha}\}$ and $\alpha > P\{D_{n} > D_{n.\alpha}\}$ for some selected values of n and a.

One-Sided Test: α =	.10	.05	.025	.01	.005	α =	.10	.05	.025	.01	.005
Two-Sided Test: α =	.20	.10	.05	.02	.01	α =	.20	.10	.05	.02	.01
n = 1	.900	.950	.975	.990	.995	n = 21	.226	.259	.287	.321	.344
2	.684	.776	.842	.900	.929	22	.221	.253	.281	.314	.337
